

The CARE Program

The Indiana Chapter of the American Academy of Pediatrics, with support from Indiana FSSA, has created the CARE Program to help address the mental health needs of children and adolescents throughout the state of Indiana.

The CARE Program:

- **Connects Hoosier children and their families to the mental health services they need**
- **Identifies and addresses barriers that impact a family's ability to engage in services**
- **Conducts follow-up interviews with participating families and documents their feedback**
- **Has created a living database of the pediatric mental health services that are available throughout the state**

Mental health providers, please complete the online form below. It will add your information directly into our CARE Program mental health provider database
